## GSE FILTER

ONE-STOP SOLUTION PROVIDER FOCUSED ON INDUSTRIAL LIQUID FILTRATION & AIR POLLUTION CONTROL

Himanshu Budhia, Director  
Sudhanshu Budhia, Director

India is seeing rapid industrialization, and the authorities are continuously tightening the pollution control norms, which makes it mandatory for the industrial community to install and update their pollution control equipment. Also, considering employees' health, industries are stringent about using industrial filtration on their premises. The ability to be cleaned in situ and the extension of filter life with higher contamination holding capacity are key factors helping the market gain momentum in the coming years. With 23 years of experience in filtration, GSE Filter Pvt Ltd is an Indian-based company focusing on Industrial Liquid Filtration and Air Pollution Control.

Attracted by the exponential growth in the industrial filter segment, many players are filling the space in the market. Filtration and Pollution control is the ancillary requirement for the companies, and only a few have a dedicated team to address this critical requirement. Customers expect a reliable, robust, cost-effective solution to their needs, but their inadequate subject knowledge proves expensive. Incorporated

in 1999, GSE Filter was involved in trading a few water treatment components within Chennai but gradually expanded its outreach to other states and now selling products all over India. GSE Filter has always believed in keeping itself abreast with innovation and the latest technology in filtration by visiting exhibitions and conferences worldwide. "The covid times brought many changes, but the company took the plunge by setting the Wound PP Filter Unit in 2020. GSE Filter believes in offering economically feasible solutions and backing it up with necessary after-sales service making it a reliable brand", speaks Himanshu Budhia, Director, GSE Filter.

**GSE Filter will be working towards increasing production capacity by upgrading the machinery of existing units & meeting the growing demand**

### Delivering Valuable Solutions

GSE Filter is a leading supplier of components related to Reverse Osmosis Systems besides other popular technologies in liquid filtration. This experience has propelled it to offer assembled systems, which include Skid Mounted RO Systems, UF Systems, DM Plants, and Softeners, under its brand, NZO. GSE Filter is one of the few manufacturing

houses in South India capable of offering Filter Bags of both the traditional and the new age pleated type under its brand name, Vayufil. It has started participating in international exhibitions, and its products are also being exported to the UAE, Sri Lanka, Bangladesh, Dominican Republic, West Africa, and the USA. "GSE Filter has gained immense experience to provide customized solutions and consultancy to large industrial organizations", adds Sudhanshu Budhia, Director, GSE Filter.

GSE Filter is among the few organized companies catering to water and air filtration segments. It owns the responsibility to supply quality; thus, its products come with virgin grade PP alone, having no detrimental effect on health. The products are tested and validated by world-renowned companies like IAPMO. GSE Filter is an active member of the WQIA (Water Quality India Association) – a national association dedicated to the cause of clean drinking water. It has a chair on the board of this association and currently holds the responsibility of the Vice President. The company believes in creating an enjoyable work experience for its team and operates on a lean, inclusive, transparent organizational structure.

GSE Filter will be working towards increasing production capacity by upgrading the machinery of existing units and meeting the growing demand. In-house manufacturing facilities for an additional range of filters are on the cards, and it is also looking at offering innovative technology like remote monitoring in our assembled systems. GSE Filter is dedicated to unlocking the potential by expanding its business in Bangladesh, Africa, the Middle East and South America. [li](#)
